Propellerhead

Auckland, New Zealand

Subject: Application for Senior Software Engineer (Core Engineering) — Move to New Zealand

Dear Hiring Team and CTO,

I am writing to express my strong interest in the Senior Software Engineer position on Propellerhead's Core Engineering team in Auckland. With over 9 years of full-stack engineering and distributed systems architecture experience, combined with deep expertise in LLM-assisted workflows and developer tooling, I am excited by Propellerhead's mission to bridge innovative research/PoCs with enterprise-grade production software. I am actively planning my relocation to Auckland and am fully prepared to attend the final in-person interview in New Zealand.

Here is how my technical background directly aligns with Propellerhead's core engineering objectives:

- **Bridging PoCs to Production:** As a Principal Engineer and Tech Lead, I specialize in taking experimental architectures—such as multi-agent orchestration systems and Model Context Protocol (MCP) data engines—and hardening them into reliable, containerized microservices ready for enterprise scale.
- **Polyglot Systems & Architecture Evolution:** I bring deep experience with enterprise backends (C#/.NET, Python, Node.js), modern frontend frameworks (TypeScript, React), and systems-level engineering (C++ in real-time defense simulators, with active application of Rust principles). I am well-equipped to help migrate legacy polyglot codebases toward standardized Rust and TypeScript architectures.
- **Distributed Systems & Scalable Infrastructure:** I have designed and operated high-throughput, event-driven architectures leveraging Apache Kafka, Azure Service Bus, AWS EventBridge, Docker, and Kubernetes (AKS), using CI/CD pipelines and infrastructure-as-code (IaC) to guarantee repeatable, portable deployments.
- **AI-Assisted Development Pioneer:** I don't just use LLMs for syntax generation—I build the harness around them. I have developed custom MCP sidecars and LangGraph multi-agent frameworks with automated guardrails, helping engineering teams multiply their productivity and embed AI safely into daily development lifecycles.
- **Technical Mentorship & Strategic Alignment:** Reporting directly to executive leadership and client CTOs throughout my career, I regularly define technical blueprints, establish coding standards, conduct architectural reviews, and mentor engineers across all experience levels.

I admire Propellerhead's 20-year track record of delivering impactful digital platforms and its forward-looking embrace of AI-assisted software delivery. I look forward to contributing to your core engineering team in Auckland.

Thank you for your time and consideration.

Warm regards,

Naveed Ahmed
